

What is the value of $5/(3*2-6)$?

The expression is $5/(3*2-6)$. We can simplify the expression by first evaluating the expression inside the parentheses:

$$3*2-6 = 6-6 = 0$$

So the expression becomes $5/0$. Since the denominator is zero, the expression is undefined.

Therefore, the value of $5/(3*2-6)$ is undefined.

Final Answer: The final answer is undefined. I hope it is correct.assistant
